🚀 SUBMISSION PLAYBOOK · META GLOBAL AI DEVELOPER HACKATHON

CleanQuest — Step-by-Step Submission Guide

Revised master checklist, copy-paste Cerebral Valley submission fields, 3-minute video script with mandatory disclosures, bonus prize verification steps, and live-finals playbook.

1. Open Cerebral Valley Submission Portal ↗
2. Open Live CleanQuest App
3. View Judges' Presentation Report
4. Download Judges' PDF
5. Open Spectator Board
6. This Submission Playbook (HTML + PDF) https://officebeats.github.io/cleanq LIVE · STEP-BY-STEP ission.html

SUBMISSION DEADLINE
Wed, Nov 4, 2026 · 9:00 PM ET
8:00 PM CT (Chicago) · Submit at least 2 hours early

TRACK & THEME
Indie Developer · $395K Pool
Theme:
Build for Your World
($150K 1st Prize)

BONUS PRIZES TARGETED
Open Weights ($10K) + Viral ($20K)
Baseten Spark Open log + X (Twitter) video by Nov 8

JUDGING & LIVE FINALS
Nov 5–8 · Finals Mon Nov 9
Top 5 per track present live at Closing Ceremony

Official Schedule & Prize Breakdown (From Event Details & Official Rules Waiver)

DATE / TIME (ET)	MILESTONE / PRIZE CATEGORY	ACTION REQUIRED FOR CLEANQUEST
Wed, Nov 4 · 9:00 PM ET (8:00 PM CT / Nov 5 02:00 UTC)	**Hard Submission Deadline & Credit Claim Cutoff**	Submit via /hackathon/submit before 7:00 PM ET (2 hours early). Ensure Ernesto, Bill, and Dom have each claimed their individual $150 Meta API credits.
Thu, Nov 5 – Sun, Nov 8	**Stage 1 (Pass/Fail) & Stage 2 (0–10 Weighted Rubric) Judging**	Keep GitHub Pages live, repo public, and Meta/Baseten endpoints healthy. Drive engagement on your X (Twitter) demo post through **Sun, Nov 8 EOD** for the **$20K Most Viral Project** award.
Mon, Nov 9 · 12:00 PM ET	**Closing Ceremony · Top 10 Announced (5 Indie + 5 Startup) · Live Finals**	If selected in the Top 5 Indie finalists, run the **3-Minute Live Finals Stage Playbook** (Step 6 below). Public gallery **Community Vote ($10K)** also opens on Nov 9.
Mon, Nov 16	**Community Vote Winner Announced ($10,000)**	Share the public gallery voting link with cleaning crews, operators, and community from Nov 9 to Nov 16.

⚠ READ FIRST · DISQUALIFICATION & PASS/FAIL GUARDRAILS

Five Non-Negotiable Submission Rules

- [x] **1. Mandatory First Sentence in the 3-Minute Video (Pre-Existing vs. Event-Built Work):** The hackathon rules require opening the demo video with one clear line separating pre-existing work from what was built during the event, and showcasing only event-built work. Say verbatim: *"CleanQuest started as a basic single-screen camera timer prototype;*

everything we are showing today — the 15-screen trilingual MVP, MECE JanSan taxonomy, Muse Spark 1.3 verified scorecards, SAM 3.1 segmentation overlays, Muse voice-note transcription, Baseten Spark Open provider + audit log, 650+ neural voice clips, 122 BPM WebAudio synth, AAA Daily Swipe Deck, and Dual-Mode Esports Leaderboard — was built during this hackathon."

- [x] **2. Never Frame CleanQuest as a "Simple Image Analyzer":** "Simple image analyzers" are on the organizers' pass/fail anti-pattern list. Always present CleanQuest as a **closed-loop gamified work-verification platform, daily trilingual training deck, and portable cleaner-owned career passport + geofenced inspection record**.
- [x] **3. Strict Product Language Rules:** (a) The game-show host voice **hypes and celebrates only** — it never instructs or coaches technique during a run; (b) CleanQuest scores **visible cleanliness and technique only** — never claim sanitation or disinfection verification; (c) A benchmark time is **never a certification**; (d) Never name external trade associations in the repo or UI (use generic "standards body").
- [x] **4. Exact README Phrase Rule:** The phrase `powered by Muse at scale` must appear **exactly once** in `README.md` (in the intro) and nowhere else in the repository. (Already verified: count = 1).
- [x] **5. Zero Secrets in Git:** API keys (Meta Model API, Baseten, OpenRouter, Gemini, OpenAI, Anthropic, Groq) are entered only in the browser's `Settings ⚙` screen (stored in `localStorage`) and never committed to the repository.

STEP 1 · CREDITS & LIVE PARTNER TELEMETRY

Claim Credits & Record 2 Live Cloud Runs (Meta API + Baseten Spark Open)

To qualify for Stage 1 Pass/Fail (genuine use of Meta AI models) AND the **$10,000 Best Build on Meta Open Weights** bonus prize (where the infrastructure partner verifies real traffic on `meta-models/muse-spark-open-1026`), complete these checks before recording your video:

- [ ] **1A. Claim $150 Meta Model API Credits (Before Wed Nov 4, 9:00 PM ET):** Every team member (Ernesto Rodriguez, Bill Basil, Dom) must claim their $150 credit individually via the Cerebral Valley form. Verify the credit appears on the Meta Developer Billing page, add a payment method to activate API calls, and set a **$150 Spend Limit notification**.
- [ ] **1B. Enter Keys in CleanQuest Settings (`⚙` in Top-Right):** Open officebeats.github.io/cleanquest, tap `⚙`, paste your **Meta Model API Key** and your **Baseten API Key**, and tap **SAVE KEYS**.
- [ ] **1C. Run 1 Live Round on Meta Model API (`muse-spark-1.3` + `sam-3.1` + `muse-voice-transcribe-1.0`):** Set Provider to **Meta Model API**, complete a real Before/After run on a sink or desk, record a 3-second spoken voice note on the Results screen, and verify the per-surface scorecard, dashed SAM 3.1 bounding boxes, transcribed note, and `Verified by Meta Model API · muse-spark-1.3 + SAM 3.1` provenance line appear.
- [ ] **1D. Run 1 Live Round on Baseten Spark Open (`meta-models/muse-spark-open-1026`):** Open `⚙ Settings`, switch Provider to **Baseten Spark Open**, complete a second Before/After run so live inference traffic registers on Baseten's servers and appends a verified entry to the in-app **Provider Run Log**. Tap **EXPORT LOG** to save the JSON audit trail.

STEP 2 · PRE-FLIGHT TECHNICAL AUDIT

Verify Repository, Live Links & Automated Gates

All automated checks are currently green on `main`. Run this one-liner in your terminal anytime before submitting to re-confirm syntax, banned-token cleanliness, and GitHub Pages status:

Terminal Pre-Flight Verification Command Copy Command

```
cd /Users/ernestorodriguez/orca/projects/clean-quest/cleanquest && node --check app.js && node --check deck.js && grep -c "powered by Muse at scale" README.md && gh repo view officebeats/cleanquest --json visibility,isFork,url && gh api repos/officebeats/cleanquest/pages --jq '.status + " -> " + .html_url'
```

LIVE DELIVERABLE	PUBLIC URL (VERIFY HTTP 200 BEFORE SUBMITTING)	STATUS
1. Live CleanQuest Web App	https://officebeats.github.io/cleanquest/	`LIVE · BUILT`
2. Public GitHub Repository	https://github.com/officebeats/cleanquest	`PUBLIC · NOT A FORK`
3. Judges' Presentation Report (HTML)	https://officebeats.github.io/cleanquest/docs/judges/report.html	`LIVE · 18 SHOTS`
4. Judges' Presentation Report (PDF)	https://officebeats.github.io/cleanquest/docs/judges/report.pdf	`LIVE · PDF`
5. Live Breakroom Spectator Board	https://officebeats.github.io/cleanquest/?spectator=1	`LIVE · 15S REFRESH`

`STEP 3 · RECORDING THE 3-MINUTE DEMO VIDEO`

Shot-by-Shot 3:00 Demo Video Script (Optimized for the 4 Rubric Weights)

Judges score **Impact (30%)**, **Use of Meta AI Tooling (25%)**, **Demo (25%)**, and **Technical Depth (20%)**. Keep total runtime strictly **≤ 3:00** (aim for `2:45–2:55`) and upload to YouTube (Unlisted or Public), Loom, or direct MP4 as required by the Cerebral Valley form.

TIMECODE	ON SCREEN	WHAT TO SAY / DEMONSTRATE (RUBRIC TARGET)
0:00–0:22 Mandatory Disclosure + Impact (30%)	Open on Welcome screen with 122 BPM house groove playing. Tap 🌐 `ESPAÑOL` (hears Mexican Spanish intro), then tap 🌐 `ENGLISH`.	**Say the mandatory separation line first:** *"CleanQuest started as a basic single-screen camera timer prototype; everything you see today — the 15-screen trilingual MVP, MECE JanSan taxonomy, Muse Spark 1.3 scorecards, SAM 3.1 overlays, voice transcription, Baseten Spark Open log, 650+ neural voice clips, and Daily Deck — was built during this hackathon. CleanQuest makes the invisible 2 a.m. cleaning shift visible: cleaners prove their work with two photos and own a portable verified record."*
0:22–0:50 Consent + 10s Judge Demo (Demo 25%)	Tap `ACCEPT THE CHALLENGE` → Consent Gate read-aloud + 44px Glove PIN Numpad → Instructions → tap `JUDGE DEMO · SAMPLE SCORE`.	Show the plain-language consent gate (*"faces are never identified; data is for training and recognition, never discipline"*). Tap **Judge Demo**: let judges hear the `0% → 75%` F-Dorian count-up roll, the ✨ `A-RANK` musical stinger, and the natural **Kokoro-82M** spoken score + verdict reaction. Point out the 3 weighted bars (**Clean 50% · Technique 25% · Time 25%**) and 🔊 `REPLAY SUMMARY`.

0:50–1:50 Live Clean + Meta AI Stack (Tooling 25%)	Camera Check-In: show the **10 MECE JanSan Building Sectors, 13 Areas & 28 Spots** + single-QR scanner. Frame a real sink/desk → tap `START` → wipe surface → tap `COMPLETE CHALLENGE` (1-tap auto-captures After photo).	Highlight: (1) **Locked running counter** (cannot be paused/stopped mid-run), (2) **Host voice inspiring every 6–8 seconds** while `sampleLiveRunActivity()` samples 9 surface zones live, (3) **1-tap Complete** auto-capturing the 2nd photo, (4) On-device `verifyStationEnvironment` mismatch gate, and (5) Cloud **Muse Spark 1.3** per-surface scorecard + **SAM 3.1** bounding boxes + spoken voice note transcribed via **Muse Voice Transcribe 1.0**.
1:50–2:25 Baseten Spark Open + Supervisor Tools (Tech Depth 20%)	Open `⚙ Settings` → show **1-Click OpenRouter SSO** + **Baseten Spark Open (** `meta-models/muse-spark-open-1026` **)** toggle + Provider Run Log export. Then tap `PASSPORT, CREW & SUPERVISOR`.	Show the **Baseten Spark Open** provider log (evidence for the *$10K Best Build on Meta Open Weights* prize). On the Supervisor screen, show the geofenced Inspection Log CSV/JSON export, printable V2 QR stickers (Pane 12), 1-tap Squad Switcher (Pane 13), and 5-day Training Pack assignment (Pane 15) — noting that **no admin can ever edit a score**.
2:25–3:00 AAA Daily Deck + Dual Leaderboard Close (Impact + Viral)	Open `DAILY DECK` (hears `deck-intro.mp3`) → swipe 1 card right (`✨ NAILED IT! +100 XP` + Ding-Chime + subtle `YOUR LOGO HERE` sponsor crest) → tap `🏆` to open the **Dual-Mode Leaderboard** (`⚡ SHIFT CHALLENGE` / `🃏 DAILY DECK`) + `?spectator=1`.	Show the widescreen animated SVG diorama, brand-neutral learning rule with labeled post-answer sponsor logo slot, and the beat-synced **3-Pillar Championship Podium Stage** + **Daily Deck Leaderboard** + 1-tap `SHARE PASSPORT`. Close with: *"The system scores, nobody edits — every run builds a verified career record the cleaner owns."*

STEP 4 · COPY-PASTE CEREBRAL VALLEY SUBMISSION FORM

Exact Copy-Paste Fields for the Submission Portal

Open cerebralvalley.ai/e/meta-ai-developer-hackathon/details, click **Submit Project**, and paste these exact blocks:

Project Name Copy

```
CleanQuest
```

Track, Theme & Bonus Categories Copy

```
Track: Indie Developer Track
Theme: Build for Your World
Bonus Prizes:
1. Best Build on Meta Open Weights ($10,000) — Muse Spark Open via Baseten
2. Most Viral ($20,000) — X (Twitter) Demo Video
```

Team Members (Ensure All Teammates Are Listed on the Form) Copy

```
1. Ernesto Rodriguez (Lead Developer & Architect — Oak Park, IL · Aladdin Studio LLC)
2. Bill Basil (Commercial Cleaning Operator & Domain SME Co-Developer)
3. Dom (Teammate & Co-Builder)
```

One-Sentence Pitch / Tagline Copy

```
CleanQuest turns the invisible 2 a.m. commercial cleaning shift into a trilingual AI-verified game, daily micro-training deck, geofenced inspection log, and portable career passport owned by the cleaner.
```

Project Links (Live App, GitHub Repo, Judges' Report & Spectator Board) Copy

```

Judges' Presentation Report (PDF): https://officebeats.github.io/cleanquest/docs/judges/report.pdf
Live Breakroom Spectator Board: https://officebeats.github.io/cleanquest/?spectator=1
```

Full Project Description & Architecture (Copy-Paste into Description Field) Copy

```
PROBLEM & WORLD (BUILD FOR YOUR WORLD)
Commercial night cleaners do essential, physically demanding work at 2 a.m. that nobody sees — receiving zero recognition, no portable proof of skill when changing jobs, and paper binders of training that nobody opens. Meanwhile, building service contractors (BSCs) lose contracts over "they didn't clean" disputes and spend hours driving between sites for re-checks.

WHAT CLEANQUEST DOES
CleanQuest is a closed-loop gamified work-verification platform, daily trilingual training deck (English, Mexican Spanish, and Polish), and portable cleaner-owned career record:
1. Check-In & MECE JanSan Station Assignment: Cleaners check in via a registered site picker and Version-2 QR sticker scanner across a MECE JanSan taxonomy of 10 commercial building sectors, 13 facility areas, and 28 cleaning spots.
2. Timed Run & Live 9-Zone Vision Telemetry: A cleaner snaps an in-app Before photo and cleans against a locked 1:30 benchmark clock while an energetic game-show host hypes them every 6–8 seconds over a 122 BPM WebAudio house groove. During the run, on-device vision samples a 36×27 luma grid across 9 surface zones and captures mid-run progress snapshots. Tapping Complete Challenge automatically captures the After photo and submits in one step.
3. Two-Rung AI Verification Ladder (On-Device + Meta Cloud & Open Weights):
   - Rung 1 (On-Device, Zero-Key, Private by Construction): MediaPipe EfficientDet-Lite0 runs an Environment & Station Mismatch Gate (verifyStationEnvironment) plus bounding-box object clearance matching, paired with a 96×72 structural edge correlation check, a 3×3 luminance gradient analyzer, and MediaPipe Pose Landmarker Lite for victory-pose style scoring.
   - Rung 2 (Meta Model API & Baseten Spark Open): Downscaled 768px Before/After JPEG pairs are graded by Muse Spark 1.3 (api.meta.ai) or Muse Spark Open (meta-models/muse-spark-open-1026 on Baseten) into structured per-surface scorecards with 0.6 confidence gating, grounded in pixels by SAM 3.1 surface bounding-box overlays, with spoken notes transcribed via Muse Voice Transcribe 1.0 (muse-voice-transcribe-1.0). Every Baseten/cloud run is recorded in an exportable Provider Run Log JSON.
4. Explainable 50/25/25 Scorecard & 1-Tap Appeals: Every score is explained across three bars — Visible Cleanliness (50%), Technique (25%), and Benchmark Time (25%, with +15s chemical dwell credits never penalizing speed) — accompanied by a 5-Tier musical stinger, gapless Kokoro-82M spoken percentage readout, and a 1-tap Dispute button. No admin, supervisor, or sponsor can ever edit a score.
5. AAA Daily Swipe Deck & Dual-Mode Esports Leaderboard: Cleaners swipe 5 brand-neutral training cards per day (with widescreen SVG dioramas, missed-card repeat, and post-answer labeled sponsor slots) and compete on both the Shift Challenge Leaderboard and the Daily Deck Leaderboard, while supervisors manage sites, QR stickers, 5-seat squads, and 5-day training packs.
```

STEP 5 · $20,000 MOST VIRAL PRIZE PLAYBOOK

Post the Demo Video on X (Twitter) Immediately After Submitting

The **Most Viral ($20,000)** bonus prize goes to the demo video posted on X (Twitter) with the highest engagement by **November 8, 2026**. Post your 3-minute video (or a punchy 60-second highlight cut + full link in reply) using this copy-paste template:

X (Twitter) Launch Post Template Copy Post

```
We built CleanQuest for the @MetaAI & @cerebral_valley Global AI Developer Hackathon! 🧹✨

Night-shift cleaners do invisible work at 2 a.m. CleanQuest turns commercial cleaning into a trilingual (EN / ES-MX / PL) game-show challenge verified by Muse Spark 1.3, SAM 3.1 & Baseten Spark Open:
📸 Snap Before & After (1-tap auto-capture)
```

```
🎙️ Neural host hypes you every 6–8s over a 122 BPM house groove
🧠 50/25/25 AI scorecard + SAM 3.1 surface overlays
📱 Daily Swipe Deck + Dual Esports Leaderboard

Try it live (no login needed): https://officebeats.github.io/cleanquest/
Judges' Report: https://officebeats.github.io/cleanquest/docs/judges/report.html
```

STEP 6 · LIVE FINALS PLAYBOOK (MONDAY, NOV 9, 2026)

How to Run the Live Finals Stage Demo if Selected in Top 5

1. **15 Minutes Before Going Live:** Open officebeats.github.io/cleanquest on your phone/laptop, open `⚙ Settings`, confirm your **Meta Model API** and **Baseten** keys are saved, run 1 warmup round so MediaPipe TFLite weights are cached in the browser, and open ?spectator=1 on a second tab/monitor.
2. **First 20 Seconds on Stage:** Let judges hear 5 seconds of the 122 BPM house groove + Welcome intro, tap `🌐 ESPAÑOL` to demonstrate instant Mexican Spanish parity, then tap `JUDGE DEMO · SAMPLE SCORE` on Instructions for an instant 10-second `75% ✨ A-RANK` reveal.
3. **Live 60-Second Room Run:** Scan the printed `CQ-QR-OFFICE-BREAKROOM-SINK` sticker, tap `START`, wipe the prop surface while the host calls the action every 6–8 seconds, and tap `COMPLETE CHALLENGE` to auto-capture the After shot and reveal the live **Muse Spark 1.3 + SAM 3.1** scorecard.
